ABLE Kids Opens New Savannah Location Featuring Evidence-Based, Calming Design

(Savannah, GA) - ABLE Kids is proud to announce the opening of its newest location in Savannah, Georgia, thoughtfully designed with an all-new interior to support learning, emotional regulation, and positive outcomes for the children it serves.

The Savannah center was intentionally created using evidence-based design principles that promote a calm, structured environment. From soothing color palettes and purposeful socializing centers to carefully planned learning spaces and therapy rooms, every detail was selected to reduce overstimulation and maximize focus, engagement, and progress for the children and families ABLE Kids serve.

“This new location reflects our commitment to helping children with Autism Achieve Beyond Life’s Expectations. We are incredibly proud of this space that helps both our children and our staff thrive. In the next months we will continue to roll out this updated look across our locations in the Southeast.” Said Emily Puskar, CEO of ABLE Kids.

ABLE Kids provides compassionate, high-quality ABA, Speech, and Occupational therapies for children with autism, emphasizing individualized care and environments that foster growth, confidence, collaboration, and success. The Savannah location continues this mission by blending clinical excellence with intentional design to support positive, long-term outcomes.
